

## Pay-per-view

A serene approach to the orthodontic budget...

### Problem : defining and managing the budget :

Whether you can benefit from a reimbursement according to a legislation that is unfortunately outdated both in terms of amounts and timing of interventions by the RIZIV, or whether you do not meet the conditions (over 15 years old, unauthorized interruption, ...), having a clear and complete budget is a need that is too rarely met.

Even if mutual insurance companies and other insurances have been offering for years supplementary benefits of varying levels and modalities (according to their own wealth; there are therefore huge differences between mutual insurance companies), this unfortunately does not cover the budget and remains out of time. It is therefore the natural wish of all parents and patients to be offered clear and flexible formulas to be able to manage their budget serenely.

### Our commitment to our patients : quality without compromise

### Forecast of resources needed in time and material + extended coverage :

With experience, it is possible to evaluate the needs to best treat each patient and maintain the result.

In case of great therapeutic uncertainty, the doubt will only concern an additional fitting, most often foreseeable, and possibly an additional duration, depending on the growth, the individual biological response, and especially on the effective collaboration of the patient (and the parents' priorities).

We systematically calculate the personalized budget corresponding to the minimum resource for your treatment, and we match it with a coverage for a classic duration for this treatment, thus a priori too long if everything goes as planned considering the technologies used and our experience.

If it is possible to deliver the same work for the same result in less time, the budget will remain unchanged even if the relative value of the treatment is increased by the speed.

If the minimum time is exceeded or if options are used, only the extra costs actually used and/or the monthly follow-up fees that start after the spread are to be paid in addition to the calculated flat rate.

**Your budget can never get out of hand, any variations are minimal and known in advance.**

#### Option 1: pay as you go (cash - bank card - credit card)

You simply want to respect the estimate and you pay everything from the beginning:

The deposit if you order the equipment, and then the balance of the treatment package when it is installed.

#### Option 2 : free credit by installment

Your financial estimate includes an insert that offers you several types of down payments associated with monthly payments calculated on the basis of the minimum treatment resource.

The chosen deposit must be paid BEFORE the fitting of the equipment or the optical scan in case of order.

After signing a direct debit mandate and acceptance by your bank, the following monthly installments will be automatically debited from your account on the 15th of each month.

To allow this debit; it is **imperative** to bring your **bank card and the identity card of the payer on the day of the installation.**

It is not possible to pay the monthly instalments in any other way than this.

In case of non-compliance with this commitment, the patient is exposed to the claim of the entire balance of the financial planning.

### The confort of no money

Once you are free of financial concerns, it will be easier and more pleasant to devote yourself to the treatment itself.

No more worries either in case of a young patient coming alone or with a third person.

Our computerized system will keep track of the mutual intervention at all times.

Our conception of the service in terms of financial planning?

The clarity of an amount known in advance, accessible to each one according to its rhythm and the chosen advantages, without repeated constraints or unpleasant surprises.
